The biblatex-true-citepages-omit package
Correcting a limitation of citepages=omit option of biblatex styles

Maïeul Rouquette   Version 1.3.0

1 Documentation

1.1 Goal

The citation styles of the family *verbose* of the biblatex package offer an *citepages=omit* option.

```
\usepackage[bibstyle=verbose,citestyle=verbose,citepages=omit]{biblatex}
```

This option is very useful: it omits the pages field when a citation is made with a pages' number. For example, the following entry

```
@article{Kaestli1993,
        Author = {Jean-Daniel Kaestli},
        Journal = {Apocrypha},
        Number = {3},
        Pages = {111-123},
        Subtitle = {à propos d'un récent article de K. Schäferdiek},
        Title = {Le rapport entre les deux vies latines de l'apôtre Jean},
        Year = {1993}}
```

called with:

```
\cite[112]{Kaestli1993}
```

will be printed as:

> Jean-Daniel Kaestli. "Le rapport entre les deux vies latines de l'apôtre Jean. à propos d'un récent article de K. Schäferdiek". In: *Apocrypha* 3 (1993), p. 112

and not as:

> Jean-Daniel Kaestli. "Le rapport entre les deux vies latines de l'apôtre Jean. à propos d'un récent article de K. Schäferdiek". In: *Apocrypha* 3 (1993), pp. 111–123, p. 112

This option works perfectly, except if you add a text after page's number, as you can see in the following example.

```
\cite[\pno~112, on this point etc.]{Kaestli1993}
```

> Jean-Daniel Kaestli. "Le rapport entre les deux vies latines de l'apôtre Jean. à propos d'un récent article de K. Schäferdiek". In: *Apocrypha* 3 (1993), p. 112, on this point etc.

It seems this problem won't be solved in the biblatex core[1].

So, if you simply load the *biblatex-true-citepages-omit* footcite package the problem will be solved.

```
\usepackage[bibstyle=verbose,citestyle=verbose,citepages=omit]{biblatex}
\usepackage{biblatex-true-citepages-omit}
...
\cite[\pno~112, on this point etc.]{Kaestli1993}
```

> Jean-Daniel Kaestli. "Le rapport entre les deux vies latines de l'apôtre Jean. à propos d'un récent article de K. Schäferdiek". In: *Apocrypha* 3 (1993), p. 112, on this point etc.

1.2 Limitations

- This package works only if you start the ⟨*postnote*⟩ argument by the \pno or \ppno commands.

- This package must be loaded after the *biblatex-source-division* package.

2 Credits

This package was created for Maïeul Rouquette's phd dissertation[2] in 2014. It is licensed on the *LaTeX Project Public License*[3].

All issues can be submitted, in French or English, in the GitHub issues page[4].

3 Revision History

1.3.0   2015-09-21

As in the standard citepages=omit, also clear the `pagetotal` field.

1.2.0   2014-08-16

No more `\realcitepagesomitcmd` command.

Internal macros with more consistent name.

1.1.1   2014-06-17

Compatibility with the `\xspace` of xspace package.

1.1.0   2014-06-16

Better implementation of `\realcitepagesomitcmd`.

1.0.1   2014-06-16

Compatibility with the `\bibleverse` of bibleref package.

1.0.0   2014-03-25

First public release.
